Language Translation for EMS Web Products

## Description of the Language Translation Process

- DEA will provide an EMS web product specific Microsoft Excel spreadsheet that contains all of the application labels, page titles, system messages and error messages with their English translations.

  Note: Values for data items (e.g. Event Types like "Meeting", "Training", etc. or Room Types like "Workspace", "Conference Room", etc.) configured within EMS or dynamic information that is inputted by an EMS user or Virtual EMS web user (e.g. Event Name like "HR Meeting", Comments, Special Instructions, etc.) are not translated.
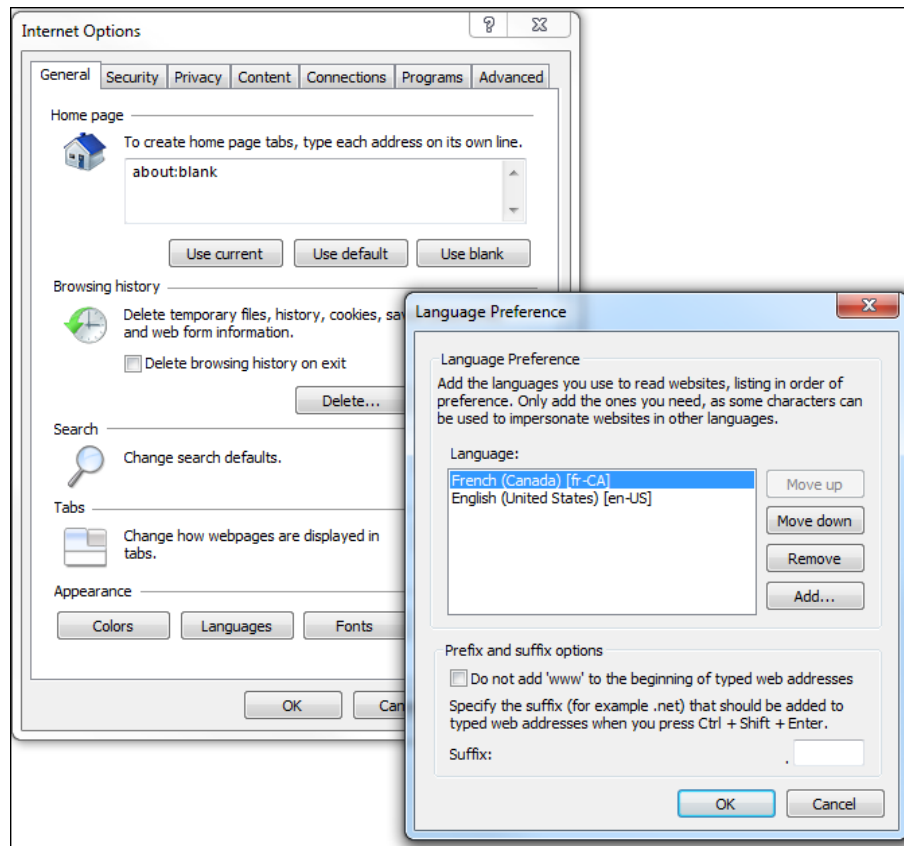

- The customer is responsible for providing the translated values for the information in the product spreadsheet.

	A	
1	Accepted	Accepté
2	AccountManagementNotes	Commentaires
3	Actions	Actions
4	ActualCount	Nombre réel de participants:
5	Add	Ajouter
6	AddBooking	Ajouter une réservation
7	AddBookingSuccessful	Demande faite avec succès
8	AddBookingTabs	Renseignements
9	AdditionalBookingCaption	Autres réservations
10	AdditionalDetails	Autres renseignements

- The customer will return the fully translated product spreadsheet to DEA.

- DEA will compile the spreadsheet into a product specific language folder containing a resource DLL. For example, the French (Canada) folder\DLL combination for Virtual EMS would be **fr-CA\DEA.EMS.WebSites.VirtualEMS.Resources.DLL**.

- The customer will drop the language folder\DLL into the **bin** folder within the web application physical directory on their web server.

- An end-user hitting the EMS web site will see the translated version of the site as long as two conditions are met:

  - ✓ The end-user's browser **Language Preference** is set to a specific language.

✓ A language folder\DLL has been compiled for that language.

Applies To

EMS Workplace 6.0/7.0, EMS Campus 3.0/4.0, EMS Enterprise 6.0/7.0, EMS Legal 6.0/7.0, EMS District 6.0/7.0
